**2. Citations and explanations**

Document DE-C-970577 is considered the prior art closest to the subject matter of claim 1 and discloses (the references between parentheses refer to that document) a kitchen appliance comprising a housing (1, 2), which is also designed to accommodate a pitcher that can be detached from the housing, and also comprising a drive motor (3) that is located within the housing (1, 2), with an output coupling (15) which can co-operate with an input coupling of a pitcher that can be detached from the housing, and comprising a cooling air duct with an aperture (12) provided in the housing (1) and a lid (14) that can adopt an open and a closed position.

The subject matter of claim 1 therefore differs from the known kitchen appliance in that the lid can adopt an open position in which the cooling air duct aperture is open and can adopt a closed position in which the aperture is closed, and in that the lid can be moved into the open position by coupling the input coupling to the output coupling.

The subject matter of claim 1 is thus novel (PCT Article 33(2)).

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

PCT/EP 03/14468

The present invention can be considered to address the problem of designing the cooling air duct aperture so that the aperture is open only when the pitcher is attached and is otherwise closed.

In the kitchen appliance disclosed in document DE-C-970577, the cooling air duct aperture is always open irrespective of the position of the cover and therefore the solution proposed in claim 1 of the present application to the problem of interest also involves an inventive step (PCT Article 33(3)).

Claims 2 to 14 are dependent on claim 1 and therefore likewise meet the PCT requirements for novelty and inventive step.
